Subject: Thanks for submitting comments on Draft Chromium/Salmon Report

HNRTC Members:

Thanks to those who provided numerous constructive comments for the Draft Report, "The Potential for Chromium to Adversely Affect Chinook Salmon (Oncorhynchus tshawytscha) Under Exposure Conditions Simulating the Hanford Reach of the Columbia River, Washington, USA." We are already working to incorporate the comments into the next, hopefully Final, draft.

We will compile a list of all the comments and the responses to each comment. We should be able to provide this list at least by the next HNRTC meeting in Lowell—hopefully a few days before, so the responses to your comments can be reviewed and discussed at the meeting. Please review the responses to your comments and let us know if your concerns have been adequately addressed. We are hoping to resolve all concerns quickly so the final report can be completed by the end of September.

Sincerely,
Brad
